

ABSTRACT OF THE DISCLOSURE

The present invention relates to a cyclic tertiary amine compound represented by a formula (1) and an organic luminescent device.

wherein A represents an alkyl group having 1 to 6 carbon atoms, a substituted or unsubstituted aryl group, a substituted or unsubstituted aralkyl group, or a substituted or unsubstituted heterocyclic group, and four As may be all the same or partly different; Y¹ represents a substituted or unsubstituted arylene group, or a substituted or unsubstituted heterocyclic divalent group; Y² represents a group represented by a formula (2), a substituted or unsubstituted condensed ring arylene group, or a substituted or unsubstituted heterocyclic divalent group,

wherein R_1 to R_8 in the formula (2) independently represents a hydrogen atom, a halogen atom, an alkyl or alkoxy group having 1 to 6 carbon atoms, an aryl group or a heterocyclic group; and Z represents single bond, an arylene group, $-\text{CH}_2-$, $-\text{CH}=\text{CH}-$, $-\text{C}\equiv\text{C}-$, $-\text{C}(\text{CH}_3)_2-$, $-\text{CO}-$, $-\text{O}-$, $-\text{S}-$ or $-\text{SO}_2-$.

Use of the cyclic tertiary amine compound as a hole transport material, a hole injection material or an organic electroluminescent material can provide organic EL devices having high luminous efficiency and a long service life.
